NOTIFICATION OF TRANSMITTAL OF THE INTERNATIONAL PRELIMINARY EXAMINATION REPORT

(PCT Rule 71.1)

Date of mailing (day/month/year)

28.07.2004

Applicant's or agent's file reference

Case 21246

IMPORTANT NOTIFICATION

International application No. PCT/EP 03/03862

International filing date (day/month/year) 14.04.2003

Priority date (day/month/year)

22.04.2002

Applicant

DSM IP ASSETS B.V. et al.

- 1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary examination report and its annexes, if any, established on the international application.
- 2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
- 3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.

4. REMINDER

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the International Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide.

The applicant's attention is drawn to Article 33(5), which provides that the criteria of novelty, inventive step and industrial applicability described in Article 33(2) to (4) merely serve the purposes of international preliminary examination and that "any Contracting State may apply additional or different criteria for the purposes of deciding whether, in that State, the claimed inventions is patentable or not" (see also Article 27(5)). Such additional criteria may relate, for example, to exemptions from patentability, requirements for enabling disclosure, clarity and support for the claims.

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/EP 03/03862

I.	Ba	sis	of	the	re	port
----	----	-----	----	-----	----	------

1. With regard to the **elements** of the international application (Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report since they do not contain amendments (Rules 70.16 and 70.17)):

	Des	cription, Pages					
	1-18	3	as originally filed				
	Cla	ims, Numbers					
	1-13	3	received on 22.04.2004 with letter of 19.04.2004				
2.	Witl lang	n regard to the langu guage in which the int	age, all the elements marked above were available or furnished to this Authority in the ernational application was filed, unless otherwise indicated under this item.	ıe			
	These elements were available or furnished to this Authority in the following language: , which is:						
		the language of a tra	nslation furnished for the purposes of the international search (under Rule 23.1(b)).				
		the language of publ	ication of the international application (under Rule 48.3(b)).				
		the language of a translation furnished for the purposes of international preliminary examination (und Rule 55.2 and/or 55.3).					
3.	With inte	n regard to any nucle rnational preliminary	otide and/or amino acid sequence disclosed in the international application, the examination was carried out on the basis of the sequence listing:				
		contained in the inte	national application in written form.				
		☐ filed together with the international application in computer readable form.					
		In furnished subsequently to this Authority in written form.					
		furnished subsequer	itly to this Authority in computer readable form.				
		The statement that the subsequently furnished written sequence listing does not go beyond the disclosur in the international application as filed has been furnished.					
		The statement that the listing has been furnitude.	ne information recorded in computer readable form is identical to the written sequenc shed.	e			
4.	The	amendments have re	esulted in the cancellation of:				
		the description,	pages:				
		the claims,	Nos.:				
		the drawings,	sheets:				
5.		This report has been been considered to g	established as if (some of) the amendments had not been made, since they have go beyond the disclosure as filed (Rule 70.2(c)).				
		(Any replacement st report.)	eet containing such amendments must be referred to under item 1 and annexed to to	his			
6.	Add	itional observations, i	f necessary:

see separate sheet

- 1. The present application discloses an aldeyde dehydrogenase which is characterized by its phyico-chemical properties. The enzyme was isolated from a microorganism belonging to the genus <u>Gluconobacter</u> (DSM 4025).
- 2. Saito et al. (Biotechnology and Bioengineering, vol. 58, April/May 1998, p. 309-315; D1) disclose a sorbosone dehydrogenase (an aldehyde dehydrogenase) having a molecular weight of 55 kDa (p. 311, right col., first paragraph). No further physico-chemical characteristics are disclosed. However, the enzyme of D1 does not appear to accept D-glucusone or D-glucose as a substrate (Hoshino et al., referred to in D1 on p. 311, right col., end of first paragraph).

None of the availabe documents suggests the existence of an enzyme as characterised in claim 1.

The aldehyde dehydrogenase of the present application therefore appears to be novel and based on an inventive activity.

- (Amended) A purified aldehyde dehydrogenase having the following physico-chemical 1. properties:
- a) Molecular weight of $100,000 \pm 10,000$ Da (consisting of two homologous subunits) or molecular weight of 150,000 ± 15,000 Da (consisting of three homologous subunits), where each subunit has a molecular weight of 55,000 ± 2,000 Da);
 - b) Substrate specificity: active on L-sorbosone, D-glucosone, D-glucose, D-xylose;
 - c) Cofactor: pyrroloquinoline quinone (PQQ),
- d) Optimum pH of from about 6.5 to about 8.0 (for the production of vitamin C from L-sorbosone) or optimum pH of about 9.0 (for the production of 2-keto-L-gulonic acid from L-sorbosone),
 - e) Inhibitors: Co²⁺, Cu²⁺, Fe³⁺, Ni²⁺, Zn²⁺, and monoiodoacetate.
- 2. The aldehyde dehydrogenase according to claim 1, which is derived from a microorganism belonging to the genus Gluconobacter which is capable of producing said aldehyde dehydrogenase.
- 3. The aldehyde dehydrogenase according to claim 2, wherein the microorganism is Gluconobacter oxydans having the identifying characteristics of the strain Gluconobacter oxydans DSM No. 4025 (FERM BP-3812), a subculture or mutant thereof.
- 4. The aldehyde dehydrogenase according to claim 3, wherein the microorganism is Gluconobacter oxydans DSM No. 4025 (FERM BP-3812), a subculture or mutant thereof.
- 5. A process for producing an aldehyde dehydrogenase having the following physicochemical properties:
- a) Molecular weight of $100,000 \pm 10,000$ Da (consisting of two homologous subunits) or molecular weight of 150,000 ± 15,000 Da (consisting of three homologous subunits), where each subunit has a molecular weight of 55,000 \pm 2,000 Da);
 - b) Substrate specificity: active on aldehyde compounds,
 - c) Cofactor: pyrroloquinoline quinone (PQQ),
- d) Optimum pH of from about 6.5 to about 8.0 (for the production of vitamin C from L-sorbosone) or optimum pH of about 9.0 (for the production of 2-keto-L-gulonic acid from L-sorbosone),
- e) Inhibitors: Co²⁺, Cu²⁺, Fe³⁺, Ni²⁺, Zn²⁺, and monoiodoacetate, which comprises cultivating a microorganism belonging to the genus Gluconobacter, which is capable of producing the aldehyde dehydrogenase having the above properties, in an aqueous nutrient medium under aerobic conditions, disrupting the cells of the microorganism, and

isolating and purifying the aldehyde dehydrogenase from the cell-free extract of the disrupted cells of the microorganism.

- 6. The process according to claim 5, wherein the reaction is carried out at a pH of from about 5.5 to 9.0 and at a temperature of from about 20 to about 50°C.
- 7. A process for producing a carboxylic acid and/or its lactone from its corresponding aldose which comprises contacting the aldehyde with the purified aldehyde dehydrogenase having the following physico-chemical properties:
- a) Molecular weight of $100,000 \pm 10,000$ Da (consisting of two homologous subunits) or molecular weight of $150,000 \pm 15,000$ Da (consisting of three homologous subunits), where each subunit has a molecular weight of $55,000 \pm 2,000$ Da);
 - b) Substrate specificity: active on aldehyde compounds,
 - c) Cofactor: pyrroloquinoline quinone (PQQ),
- d) Optimum pH of from about 6.5 to about 8.0 (for the production of vitamin C from L-sorbosone) or optimum pH of about 9.0 (for the production of 2-keto-L-gulonic acid from L-sorbosone),
- e) Inhibitors: Co²⁺, Cu²⁺, Fe³⁺, Ni²⁺, Zn²⁺, and monoiodoacetate, or cell-free extract prepared from a microorganism belonging to the genus *Gluconobacter* which is capable of producing the aldehyde dehydrogenase having the above properties in the presence of an electron acceptor.
- 8. The process according to claims 5 to 7, wherein the microorganism is *Gluconobacter* oxydans having the identifying characteristics of the strain *Gluconobacter* oxydans DSM No. 4025 (FERM BP-3812), a subculture or mutant thereof.
- 9. The process according to claim 8, wherein the microorganism is *Gluconobacter oxydans* DSM No. 4025 (FERM BP-3812), a subculture or mutant thereof.
- 10. The process of claim 7, wherein the lactone is vitamin C, the carboxylic acid is 2-keto-L-gulonic acid and the aldose is L-sorbosone.
- 11. The process according to any one of claims 7 to 10, wherein the reaction is carried out at a pH of from about 5.5 to about 9.0 and at a temperature of from about 20 to about 50°C for the production of vitamin C and 2-keto-L-gulonic acid, respectively.
- 12. The process according to any one of claims 7 to 11, wherein the reaction is carried out at a pH of from about 6.5 to about 8.0 and a temperature of from about 20 to about 40°C for the

production of vitamin C, and at a pH of about 9.0 and a temperature of from about 20 to about 30°C for the production of 2-keto-L-gulonic acid.

13. The use of the purified aldehyde dehydrogenase of claim 1 in the process for the production of a carboxylic acid and/or its lactone from its corresponding aldose which comprises contacting the aldehyde with said purified aldehyde dehydrogenase or cell-free extract prepared from a microorganism belonging to the genus *Gluconobacter* which is capable of producing said aldehyde dehydrogenase in the presence of an electron acceptor.
